11	18,792.94			563.79	373.60	18,229.15	18,602.76
12	18,602.76			558.08	369.82	18,044.67	18,414.50

**Assumptions:**

- a. Cash advance made on the day after statement cycle date
- b. No other purchases/cash advance/installment transactions made for 12 months
- c. No other charges/fees incurred during the 12 months
- d. Cardholder pays minimum payment due only

## C. Installment Loan

The computation/schedule uses the diminishing balance method, where the interest per installment period shall be computed based on the outstanding balance of the installment loan at the beginning of each installment period. This means that the interest portion of the monthly amortization will be higher during the early part of the installment term and lower towards the end of the installment term.

Installment Loan Amount : Php10,000      Factor Rate Formula:  
 Installment Term : 12 months      Factor Rate =  $\frac{\text{Rate} \times \text{Term} + 1}{\text{Term}}$   
 Monthly Add-on Rate : 1.00%      =  $\frac{(0.01 \times 12) + 1}{12}$   
 Monthly Effective Interest Rate : 1.79%  
 Monthly Factor Rate : 0.0933333      Factor Rate = 0.0933333

STATEMENT MONTH	PAYMENT	PRINCIPAL	INTEREST	OUTSTANDING PRINCIPAL BALANCE
				10,000.00
1	933.33	754.52	178.81	9,245.48
